3300 XL NSv* Proximity Transducer System
Bently Nevada* Asset Condition Monitoring

Description
The 3300 XL NSv* Proximity Transducer system is intended for use with centrifugal air compressors, refrigeration compressors, process gas compressors and other machines with tight installation requirements. The 3300 XL NSv Proximity Transducer System consists of:

- a 3300 NSv probe
- a 3300 NSv extension cable
- a 3300 XL NSv Proximitor* Sensor

The primary uses for the 3300 XL NSv Transducer System are for areas where counter bore, sideview or rearview restrictions limit the use of standard Bently Nevada* 3300 and 3300 XL 5 and 8 mm Transducer Systems. It is also ideal for small target applications, such as measuring radial vibration on shafts smaller than 51 mm (2 in) or axial position on flat targets smaller than 15 mm (0.6 in). It is primarily used in the following applications on fluid-filmed bearing machines where a small shaft or reduced side-view is present:

- Radial vibration and radial position measurements
- Axial (thrust) position measurements
- Tachometer and zero speed measurements
- Phase reference (Keyphasor*) signals

The 3300 XL NSv Transducer System design allows it to replace both the 3300 RAM Transducer Systems and the 3000-series or 7000-series 190 Transducer System. Upgrades from the 3300 RAM system to the 3300 XL NSv system may use the existing probe, extension cable, and monitoring system with 3300 XL NSv Proximitor Sensor. Upgrades from the 3000-series or 7000-series Transducer System must replace the probe, extension cable and Proximitor Sensor with NSv components.

The 3300 XL NSv Transducer System has an Average Scale Factor of 7.87 V/mm (200 mV/mil), which is the most common output for eddy current transducers. Its enhanced side-view and small target characteristics give it a shorter linear range than the Bently Nevada 3300 XL-series 5 and 8 mm Transducer System. With The 1.5 mm (60 mils) of linear range exceeds the linear range of the 3000-series 190 Transducer System.

Application Alert: Although the terminals and connector on the Proximitor Sensor have protection against electrostatic discharge, take reasonable precautions to avoid electrostatic discharge during handling.
Proximitor Sensor
The 3300 XL NSv Proximitor Sensor has similar features to those found in the 3300 XL 8 mm Proximitor Sensor. Its thin design allows the user to mount it in either a high-density DIN-rail installation or a more traditional panel mount configuration. Improved RFI/EMI immunity allows the 3300 XL NSv Proximitor Sensor to achieve European CE mark approvals without any special mounting considerations. This RFI immunity also prevents nearby high frequency radio signals from adversely affecting the transducer system. SpringLoc terminal strips on the Proximitor Sensor require no special installation tools and facilitate faster, highly robust field wiring connections.

Proximity Probe and Extension Cable
The 3300 NSv probe and extension cable are mechanically and electrically compatible and interchangeable with Bently Nevada’s previous 3300 RAM proximity probe and extension cable. The NSv probe has increased chemical resistance compared to the 3300 RAM probe, which allows its use in many process compressor applications. The side-view characteristics of the 3300 NSv probe are also superior to those of the 3000-series 190 probe when gapping the 3300 NSv probe at the same distance from the probe target.

The 3300 NSv probe comes in varying probe case configurations, including armored and unarmored ¼ -28, 3⁄8 -24, M8 X 1 and M10 X 1 probe threads. The reverse mount 3300 NSv probe comes standard with either 3⁄8 -24 or M10 X 1 threads. All components of the transducer system have gold-plated brass ClickLoc* connectors. ClickLoc connectors lock into place and prevent the connection from loosening. The patented TipLoc* molding method provides a robust bond between the probe tip and the probe body. Bently Nevada’s patented CableLoc* design provides 220 N (50 lb) of pull strength and securely attaches the probe cable to the probe tip. Connector protectors are recommended for use on the probe-to-extension cable connection, as well as on the cable-to-Proximitor Sensor connection. Connector protectors prevent most liquids from entering into the ClickLoc connectors and adversely affecting the electrical signal².

Notes:
1. Proximitor Sensors are supplied by default from the factory calibrated to AISI 4140 steel. Calibration to other target materials is available upon request.
2. Silicone tape is also provided with each 3300 NSv extension cable and can be used instead of connector protectors. Silicone tape is not recommended in applications where the probe-to-extension cable connection will be exposed to turbine oil.

Specifications
Unless otherwise noted, the following specifications are for a 3300 XL NSv Proximitor Sensor, extension cable and probe between 0°C and +45°C (+32°F to +113°F), with a -24 Vdc power supply, a 10 kΩ load, a Bently Nevada supplied AISI 4140 steel target that is 31 mm (1.2 in) diameter or larger, and a probe gap of 1.0 mm (40 mils). The system accuracy and interchangeability specifications do not apply when using a transducer system calibrated to any target other than a Bently Nevada AISI 4140 steel target.

</table>

| Power       | Requires -17.5 Vdc to -26 Vdc without barriers at 12 mA maximum consumption, -23 Vdc to -26 Vdc with barriers. Operation at a more positive voltage than -23.5 Vdc can result in reduced linear range. |

| Supply Sensitivity | Less than 2 mV change in output voltage per volt change in input voltage. |

| Output resistance | 50 Ω |
### Specifications and Ordering Information

**Part Number 147385C01**

**Rev. E (6/11)**

**Page 3 of 28**

#### Probe dc resistance:

<table>
<thead>
<tr>
<th>Probe Length (m)</th>
<th>Resistance from the Center Conductor to the Outer Conductor (R&lt;sub&gt;PROBE&lt;/sub&gt;) (ohms)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.5</td>
<td>4.0 ± 0.5</td>
</tr>
<tr>
<td>1.0</td>
<td>4.2 ± 0.5</td>
</tr>
<tr>
<td>5.0</td>
<td>5.3 ± 0.7</td>
</tr>
<tr>
<td>7.0</td>
<td>5.9 ± 0.9</td>
</tr>
</tbody>
</table>

#### Extension cable dc resistance:
- Center conductor: 0.220Ω/m (0.067 Ω/ft)
- Shield: 0.066 Ω/m (0.020 Ω/ft)

#### Extension cable capacitance:
- 69.9 pF/m (21.3 pF/ft) typical

#### Field wiring:
- 0.2 to 1.5 mm<sup>2</sup> (16 to 24 AWG)
- 0.25 to 0.75 mm<sup>2</sup> (18 to 23 AWG) with ferrules.
- Recommend using three-conductor shielded triad cable.
- Maximum length of 305 metres (1,000 feet) between the 3300 XL NSv Proximiton Sensor and the monitor. See the frequency response graphs Figure 16 and Figure 17 for signal rolloff at high frequencies when using longer field wiring lengths.

#### Linear Range:
- 1.5 mm (60 mils). Linear range begins at approximately 0.25 mm (10 mils) from target and is from 0.25 to 1.75 mm (10 to 70 mils) (approximately -1 to -13 Vdc).

#### Recommended Gap Setting:
- 1.0 mm (40 mils)

#### System performance over ambient temperature range (0°C to 45°C):

- **Incremental Scale Factor (ISF)**
  - 7.87 V/mm (200 mV/mil) +12.5%/-20% including interchangeability error when measured in increments of 0.25 mm (10 mils) over the 1.5 mm (60 mil) linear range.

- **Deviation from best fit straight line (DSL)**
  - Less than ±0.06 mm (±.2 mils).

- **Frequency Response:**
  - 0 to 10 kHz: +0, -3 dB typical, with up to 305 metres (1000 feet) of field wiring.

- **Target Size (flat target):**
  - Minimum: 8.9 mm (0.35 in) diameter
  - Recommended minimum: 13 mm (0.5 in) diameter
  - Axial position measurements on shaft diameters smaller than 13mm (0.5 in) will generally result in a change in scale factor.
  - Reducing the gap between the probe and target will help limit the change in scale factor. See Figure 12 for additional information.

- **Shaft Diameter**
  - Minimum (standard X-Y probe configuration): 30 mm (1.2 in)
  - Minimum (X-Y proximity probes offset axially by 23 mm (0.9 in)): 20 mm (0.8 in)
  - Measurements on shaft diameters smaller than 30 mm (1.2 in) usually require close spacing of radial vibration or axial position transducers. This creates the potential for their...
electromagnetic emitted fields to interact with one another (cross-talk), resulting in erroneous readings. To prevent cross-talk, maintain minimum separation of transducer tips of at least 25 mm (1.0 in) for axial position measurements or 23 mm (0.9 in) for radial vibration measurements (see Figure 14 and Figure 15 for additional information.) Radial vibration or radial position measurements on shaft diameters smaller than 20 mm (0.8 in) will generally result in greater than a 10% change in Average Scale Factor (ASF). See Figure 13 for additional information.

Counterbore

Minimum: 9.5 mm (0.375 in)
Recommended minimum: 13 mm (0.5 in)

Counterbores smaller than 13 mm (0.5 in) generally result in a change in scale factor at far gaps. Reducing the gap between the probe and the target will allow the transducer system to maintain its Average Scale Factor (ASF) over a reduced linear range. See Figure 9 for additional information.

Storage

**Temperature:** -51°C to +177°C (-60°F to +351°F)

---

**Note:** Exposing the probe to temperatures below -34°C (-30°F) for a sustained period of time may cause premature failure of the pressure seal.

---

Extension Cable Temperature Range

**Operating and Storage**

**Temperature:** -51°C to +177°C (-60°F to +351°F)

---

Proximitor Sensor Temperature Range

**Operating**

**Temperature:** -35°C to +85°C (-31°F to +185°F)

**Storage**

**Temperature:** -51°C to +105°C (-60°F to +221°F)

**Relative Humidity:** 100% condensing, non-submersible when connectors are protected. Tested to IEC 68-2-3 damp heat.

---

**Probe Pressure:**

3300 NSv probes are designed to seal differential pressure between the probe tip and case. The probe sealing material consists of a Viton® O-ring. Probes are not pressure tested prior to shipment. Contact our custom design department if you require a test of the pressure seal for your application.

**Option Descriptions**

**A:** Unthreaded Length Option

**Note:** Unthreaded length must be at least 0.7 inch less than the case length.

Order in increments of 0.1 in

**Maximum unthreaded length:** 9.2 in
**Minimum unthreaded length:** 0.0 in

**Example:** 0 4 = 0.4 in

**B:** Overall Case Length Option

Order in increments of 0.1 in

**Maximum case length:** 9.9 in
**Minimum case length:** 0.8 in

**Example:** 2 4 = 2.4 in

**C:** Total Length Option

| 0 5 | 0.5 metre (20 in) |
| 1 0 | 1.0 metre (39 in) |

Solutions with high or low pH values may erode the tip assembly of the probe causing media leakage into surrounding areas. Bently Nevada Inc. will not be held responsible for any damages resulting from leaking 3300 NSv Proximity Probes. In addition, 3300 NSv Proximity Probes will not be replaced under the service plan due to probe leakage.

Accessories
147357-01 Manual
02120015 Bulk field wire. 1.0 mm² (18 AWG), 3 conductor, twisted, shielded cable with drain wire. Specify length in feet.
138492-01 Replacement panel-mount mounting pad
138493-01 Replacement DIN-mount mounting pad
01609137 BNC (F) to banana plugs
01609138 Proximitor Connector Test Pin wiring (two test pins to a BNC (F) connector)
40971-04 50 Ω cable with two BNC (M) connectors. Use this cable in combination with adapter 01609137 and adapter 01609138 when checking performance of the transducer system from the Proximitor Sensor test pin holes.
04310310 3300 XL Proximitor Sensor Panel-mount Screws. Package includes one 6-32 UNC thread forming mounting screw (Supplied standard with 3300 XL Proximitor Housings [3300 XL option]).
Silicone self-fusing tape. A 9.1 metre (10 yard) roll of silicone tape to protect connectors. It is easy to install and provides excellent electrical isolation and protection from the environment. It is not recommended for use inside the casing of the machine.

40113-03 Connector Protector Kit. Connector Protector Kit for 3300 NSv probes and extension cables, including connector protectors and installation tools.

136536-01 Connector Protector Adapter. Connector Protector Adapter. Allows connector protector installation tools manufactured prior to 1998 to be used with 75 Ω ClickLoc connectors.

40180-03 Connector Protectors. Package contains 10 pairs of connector protectors.

03800000 Male Connector Protector. Placed on the extension cable to connect to the female connector protector on the probe and provide environmental protection of connectors.

03800001 Female Connector Protector. Placed on the probe lead to connect to the male connector protector on the extension cable and provide environmental protection of connectors. Also placed on the extension cable to slide over the Proximitor Sensor connection and protect it from the environment.

330153-05 3300 NSv Connector Kit. Used on 3300 NSv probes and extension cables. Contains one set of male and female ClickLoc connectors, sleeves and one strip of silicone tape.

163356 Connector Crimp Tool Kit. Includes one set of 75 Ω ClickLoc inserts and connector installation instructions. Supplied with carrying case.

Notes:
1. 330980 Proximitor Sensor A: options 52 and 72 come without a mounting pad and should be ordered only as spares. Each Proximitor Sensor needs a mounting pad to ensure that it is properly isolated from the housing ground.

Notes:
All dimensions on figures are in millimeters (inches) unless otherwise noted.
Standard mount ¼ -28 UNF thread probes are supplied with ⅛ inch lock nut and ⅜ wrench flats.
Standard mount M8x1 thread probes are supplied with 13 mm lock nut and 7 mm wrench flats.
Standard mount ⅜-24 UNF thread probes are supplied with ⅛ inch lock nut and ⅜ wrench flats.
Standard mount M10x1 thread probes are supplied with 17 mm lock nut and 8 mm wrench flats.
Reverse mount probes are not available with armor or connector protector options.
Letters inside quotation marks on figures refer to probe ordering options.
Stainless steel armor is supplied with or without FEP outer jacket.
FEP jacket is standard on all non-armored probes.
