3300 XL 50mm Proximity Transducer System

Product Datasheet
Bently Nevada* Asset Condition Monitoring

Description
The 3300 XL 50 mm Transducer System consists of a separate 50 mm probe, an extension cable, and a 3300 XL 50 mm Proximitor* Sensor. The large diameter coil gives this system a maximum linear range of 27.9 mm (1100 mils), the longest linear range of our eddy current transducer line. This linear range makes the 3300 XL 50mm Transducer System ideal for measuring the differential expansion (DE) or rotor expansion (RX) of large steam turbine generators that results from the difference in growth rates between the turbine rotor and the machine stator (casing).

Measuring Differential Expansion
The Differential Expansion measurement is made by using two proximity transducers that observe a collar or ramp some distance from the thrust bearing. Typical transducer mounting arrangements that require the 3300 XL 50 mm Transducer’s long linear range include:

- Two transducers observing the same side of a collar.
- Two complementary input transducers observing opposite sides of a collar, effectively doubling the measurable DE range.

The criteria for selecting a mounting method are the size of the available target, the expected amount of rotor axial movement, and the type of DE target that exists in the machine. If the collar height is sufficient and the required total measurement range is less than 27.9 mm (1.1 inches), the preferred configuration for redundant measurements is to use two transducers observing the same side of a collar. When 28 mm to 56 mm (1.1 to 2.2 inches) of total range are required, install the transducers in a complementary fashion on opposite sides of the differential expansion collar or other target material.

System Compatibility
The 3300 XL 50 mm probe comes in three case & thread configurations to physically replace all standard 7200 50 mm systems (including side and rear exit probes). The standard 7200 style mounting brackets are still available as accessories. In addition, a new bracket to adapt the probe to the 50mm DE Integral transducer sliding mount base is also available. The Proximitor Sensor has a 0.394 V/mm (10 mV/mil) output that is identical to that of the 7200 and 50 mm DE Integral systems, which allows customers to upgrade without requiring any changes in the monitor configuration. When upgrading from previous systems, every transducer system component (probe, extension cable, and
Proximitor Sensor) must be replaced with 3300 XL 50 mm components.

Proximity Probe and Extension Cable

The 3300 XL 50 mm probe is designed to survive the harshest steam turbine DE environments. It can continually operate and maintain its accuracy in high temperatures up to 200 °C (392 °F), and can withstand intermittent high temperatures up to 250 °C (482 °F). The 50 mm probe has both a front and rear seal which, combined with the High Temperature FluidLoc* cable (standard on all 50 mm probes), prevent moisture from entering the probe tip. Special high-temperature ClickLoc* connectors are also standard on the probe and extension cable. Each probe and cable comes with connector protectors and a disposable connector protector installation tool to ensure that the connectors remain free of contamination. The ClickLoc connector on the probe lead features a removable collar that facilitates routing the cable through tight clearances.

The 3300 XL 50 mm probe is available in straight exit case styles with ½-20 English threads or M14x1.5 metric threads, including a locknut with predrilled safety wire holes. The side exit probe has two ¼-20 mounting holes in the rear of the probe case. For both straight exit and side exit probes the overall case diameter is 1.99 inches.

Proximitor Sensor

The 3300 XL 50 mm Proximitor Sensor\(^1\) has the same advanced features as all 3300 XL Proximitor Sensors. Its thin design allows it to be mounted in either a high-density DIN-rail installation or a more traditional panel mount configuration. Improved RFI/EMI immunity allows the 3300 XL Proximitor Sensor to achieve European CE mark approvals without any special mounting considerations. This RFI immunity prevents the transducer system from being adversely affected by nearby high frequency radio signals. SpringLoc terminal strips on the Proximitor Sensor require no special installation tools and facilitate faster, highly robust field wiring connections.

Notes:

Proximitor Sensors are supplied by default from the factory calibrated to AISI 4140 steel. Calibration to other target materials is available upon request.

Mounting Accessories

The correct operation of the transducer system must be initially verified during installation and periodically thereafter. This is done by physically moving the transducer to simulate the motion of the shaft collar. This requires a mounting bracket that allows the transducer system to slide relative to the shaft rotor and collar.

An optional Sliding Bracket can be ordered for the 3300 XL 50 mm Transducer for both single transducer and complementary input applications. This mounting bracket allows you to verify the transducer system and gap the probes by sliding the transducer system through its linear range. The base plate of the sliding bracket is installed on the inner surface of the turbine case near the differential expansion collar. Probes are installed in the probe clamp that attaches to the sliding carriage. The sliding carriage slides onto and is secured to the base plate with bolts and safety wire. To verify and install the transducer, loosen the bolts securing the sliding carriage to the base plate and move the sliding carriage and probes. A verification kit with spindle micrometer can be temporarily secured to the base plate to provide a reference for axial verification measurements. The spindle micrometer measures the movement of the transducer system relative to the collar during these verification tests.

Specifications

Unless otherwise noted, the following specifications are for a 3300 XL 50 mm Proximitor Sensor, extension cable and probe between 0°C and +45°C (+32°F to +113°F), with a -24 Vdc power supply, a 10 kΩ load, a Bently Nevada supplied AISI 4140 steel target that is 102 mm (4.0 in) diameter or larger. The system accuracy and interchangeability specifications do not apply when using a transducer system calibrated to any target other than a Bently Nevada AISI 4140 steel target.

Electrical

Proximitor Sensor Input

Accepts one non-contacting 3300 XL 50 mm Proximity Probe and Extension Cable.

Power

Requires -17.5 Vdc to -26 Vdc without barriers at 12 mA maximum consumption, -23 Vdc to -26 Vdc with barriers.
Part Number: 174014
Rev: F

Operation at a more positive voltage than -23.5 Vdc can result in reduced linear range.

**Output resistance**

50 Ω

**Extension cable capacitance:**

69.9 pF/m (21.3 pF/ft) typical

**Field wiring:**

0.2 to 1.5 mm² (16 to 24 AWG)
Recommend using three-conductor shielded triad cable.

**Linear Range:**

27.9 mm (1100 mils). Linear range begins at approximately 1.3 mm (50 mils) from target and is from 1.3 to 29.2 mm (50 to 1150 mils) (approximately −1.5 to −12.5 Vdc).

**Average Scale Factor (ASF)**

394 mV/mm (10 mV/mil) nominal

**Deviation from best fit straight line (DSL)**

Less than ±0.74 mm (±29 mils)

**System performance over extended temperatures:**

Over a probe temperature range of -35°C to +120°C (-31°F to +248°F) with the Proximitor Sensor and extension cable between 0°C to +45°C (+32°F to +113°F), the DSL remains within ±2.03 mm (±80 mils).

Over a Proximitor Sensor and extension cable temperature range of -35°C to +65°C (-31°F to +149°F) with the probe between 0°C to +45°C (+32°F to +113°F), the DSL remains within ±2.03 mm (±80 mils).

**Recommended Minimum Target Size:**

102 mm (4.0 in) diameter (flat target)

**Compliance and Certifications**

**Note:** This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

**EMC**

European Community Directives:

- EMC Directive 2014/30/EU

Standards:

- EN61000-6-2
- EN61000-6-4

**RoHS**

European Community Directives:

- RoHS Directive 2011/65/EU

**Maritime**

The Prox must be installed so it bas to provide the terminals with a degree of protection of at least IP54.

### Mechanical

**Probe Tip Material:**

Polyphenylene Sulfide (PPS).

**Probe Case Material:**

AISI 304 stainless steel (SST).

**Probe Cable Specifications:**

75 Ω triaxial, perfluoroalkoxyethylene (PFA) insulated FluidLoc probe cable in the following total probe lengths: 1, 5 or 9 metres.

**Extension Cable Material:**

75 Ω triaxial, perfluoroalkoxyethylene (PFA) insulated FluidLoc cable.

**Proximitor Sensor Material:**

A380 aluminum

**Sliding Bracket Material:**

Anodized aluminum and stainless steel

**System Length:**

5 or 9 metres including extension cable

**Probe and Extension Cable Armor (optional):**

Flexible SST with PFA outer jacket.

**Tensile Strength (maximum rated):**

330 N (75 pounds) probe case to probe lead. 270 N (60 pounds) at probe lead to extension cable connectors.

**Connector Material:**

Gold-plated brass and gold-plated beryllium copper

**Sliding Bracket Temperature Range**

- **Operating and Storage Temperature:**
  - -51°C to +105°C (-60°F to +221°F)

**Probe Pressure:**

3300 XL probes are designed to seal differential pressure between the probe tip and case. The probe is sealed with Viton® O-rings. Probes are not pressure tested prior to shipment. Contact our custom design department if you require a test of the pressure seal for your application.

**Note:** It is the responsibility of the customer or user to ensure that all liquids and gases are contained and safely controlled should leakage occur from a proximity probe. In addition, solutions with high or low pH values may erode the tip assembly of the probe causing media leakage into surrounding areas. Bently Nevada will not be held responsible for any damages resulting from leaking 3300 XL proximity probes. In addition, 3300 XL proximity probes will not be replaced under the service plan due to probe leakage.

Note: Make sure that the extension cable length and the probe length, when added together, equal the Proximitor Sensor total length.

A: Cable Length Option
   0 4 0 4.0 metres (13.1 feet)
   0 8 0 8.0 metres (26.2 feet)

Mounting Brackets

Each Sliding Mounting Bracket comes with
- One sliding plate
- One base plate
- Sliding plate securing bolts with safety wire holes
- Lock washers

The material used for the mounting brackets is T6061-T6 aluminum. Base plate securing bolts are not provided; recommended bolt size is 3/8in or M8 socket head bolts.

3300 XL 50 mm Sliding Probe Bracket and Clamp:
330879-AXX-BXX

A: Probe Clamp Style
   0 1 Left Exit
   0 2 Right Exit
   0 3 Two clamps (used for CIDE applications)1

B: DE Mounting Bracket
   0 0 No Mounting Bracket; Clamp Only
   0 1 Single DE Mounting Bracket2
   0 2 Short CIDE Mounting Bracket3
   0 3 Long CIDE Mounting Bracket3

This bracket is recommended for most installations. While any probe may be used, the smooth side exit probe is most often used with this bracket.

1. When ordering two clamps, one right exit and one left exit clamp will be provided so that the cables exit from the same side of the CIDE bracket.
2. The B01 probe mounting bracket option is only available with the A01 or A02 probe clamp style options.
3. The B02 and B03 probe mounting bracket options are only available with the A03 probe clamp style options.
4. When replacing 50mm DE 130713, part number 330879-AA-00 should be ordered. Ordering with
BB=00 will prevent unnecessary parts from being ordered with the clamp.

### Sliding Mounting Brackets without clamps

- **131071-01** Single Transducer Mounting Bracket
- **131030-01** Short Complementary Input Differential Expansion (CIDE) Mounting Bracket
- **131031-01** Long Complementary Input Differential Expansion (CIDE) Mounting Bracket

### Non-sliding Mounting Brackets

- **167285** Kit, 50 mm Clamp Mount (used with smooth-case side exit or threaded straight exit probes).
- **167286** Kit, 50 mm Bolt Mount (used only with smooth-case side exit probes).

### Verification Kits

Each verification kit comes with:

- a verification kit bracket
- a spindle micrometer with either 0 to 2 in or 0 to 50 mm range
- two set screws
- a bracket securing bolt

The material used for the verification kit bracket is T6061-T6 aluminum.

- **131036-01** Verification Kit, Spindle Micrometer with English Units
- **131036-02** Verification Kit, Spindle Micrometer with Metric Units

---

### Accessories

- **173959** Manual
- **148722-01** 3300 XL Test Plug. The 3300 XL Test Plug has three self-contained test pins attached to three color-coded wires 1 metre in length, each terminated in a banana plug. The three-pin adapter plugs into the test pin holes on 3300 XL-style Proximitors. It is used to check the performance of the Proximitor Sensor from the test pin holes in the terminal strip without requiring the removal of the field wiring.

### Extended Range Micrometer Kit

The extended range micrometer kit contains a precision micrometer and a 100 mm (4 inch) AISI 4140 target and is intended for acceptance testing of Bently Nevada extended range transducers. Bracket options are available to hold 8mm – 50mm probes as well as the 50 mm Integral DE transducer.

- **330187-AXX-BXX**
  - **A:** Probe options
    - 01 8 mm to 50 mm probe threaded or smooth cases
    - 03 8 mm to 50 mm probe threaded or smooth cases and an adapter for 50 mm Integral DE probes
  - **B:** Micrometer Option
    - 01 Standard English 0-2 inch micrometer
    - 02 Standard metric 0-50 mm micrometer

- **02120015** Bulk field wire. 1.0 mm² (18 AWG), 3 conductor, twisted, shielded cable with drain wire. Specify length in feet.

- **02173009** Bulk field wire. 1.0 mm² (18 AWG), 3 conductor, twisted, shielded cable. Specify length in feet.
138492-01
Replacement panel-mount mounting pad

138493-01
Replacement DIN-mount mounting pad

04310310
3300 XL Proximitator Sensor Panel-mount Screws. Package includes four 6-32 UNC thread forming mounting screws (Supplied standard with 3300 XL Proximitator Housings [3300 XL option]).

03200006
Silicone self-fusing tape. A 9.1 metre (10 yard) roll of silicone tape to protect connectors. It is easy to install and provides excellent electrical isolation and protection from the environment. It is not recommended for use inside the casing of the machine.

03839410
Male Connector Protector. Placed on the extension cable to connect to the female connector protector on the probe and provide environmental protection of connectors.

03839420
Female Connector Protector. Placed on the probe lead to connect to the male connector protector on the extension cable and provide environmental protection of connectors. Also placed on the extension cable to slide over the Proximitator Sensor connection and protect it from the environment.

330153-10
3300 XL 50 mm Connector Kit. Used on 3300 XL 50 mm probes and extension cables. Contains one male (removable nut) and female ClickLoc connectors, color-coded sleeves and two pieces slit PFA tubing.

163356
Connector Crimp Tool Kit. Includes one set of multi-connector inserts and connector installation instructions. Supplied with carrying case.

173873
High Temperature Cable Zip-Ties. PEEK® cable tie is rated for use up to 200 C continuous temperature. Available in bags of 50 zip ties.

174804-01
Side Exit Probe Adapter Kit. Used to adapt side exit probes for the 330187 Extended Range Verification Kit.
