

# ADTS542F

Wireless ADTS500 Series Easy-to-Use Pitot Static Testers

The ADTS542F air data test set is a small, lightweight and cost-effective portable two-channel flightline pitot static tester for 'Aircraft on the Ramp' testing. The ADTS542F is also ideal for any aircraft with low pitot static volume demands or for light aircraft, including helicopters and propeller-driven airplanes. It provides pitot static air data validation, leak testing, fault finding and avionics instrumentation testing.

## ADTS542F at a glance

- ADTS Touch hand terminal with Bluetooth® wireless technology (backup cable supplied)
- Swipe-action touch screen user interface with color graphics and menu
- Uses standard icons and layouts for routine testing
- Multiple languages
- High flow proportional pressure control technology
- Low airspeed option
- TERPS high accuracy pressure sensors inside
- Accuracy suitable for RVSM validation
- Optional 15-month calibration interval for increased savings on the cost of ownership
- Battery backup option
- Engine Pressure Ratio option
- Stores customized aircraft test sequences
- Accessories bag
- Optional accessories: ADTS542F backpack, ADTS Touch carry case, hoses and adaptors
- GE ADTS global service support
