Introduction
This manual contains installation and operating instructions for PACE Pressure Indicators.

Safety
The manufacturer has designed this equipment to be safe when operated using the procedures detailed in this manual. Do not use this equipment for any other purpose than that stated, the protection provided by the equipment may be impaired. This publication contains operating and safety instructions that must be followed to make sure of safe operation and to maintain the equipment in a safe condition. The safety instructions are either warnings or cautions issued to protect the user and the equipment from injury or damage. Use qualified * technicians and good engineering practice for all procedures in this publication.

Pressure
Do not apply pressures greater than the maximum working pressure to the equipment.

Toxic Materials
There are no known toxic materials used in construction of this equipment.

Maintenance
The equipment must be maintained using the procedures in this publication. Further manufacturer’s procedures should be done by an authorized service agents or the manufacturer’s service departments.

Technical Advice
For technical advice contact the manufacturer.
* A qualified technician must have the necessary technical knowledge, documentation, special test equipment and tools to carry out the required work on this equipment.

WARNINGS

TURN OFF THE SOURCE PRESSURE(S) AND CAREFULLY VENT THE PRESSURE LINES BEFORE DISCONNECTING OR CONNECTING THE PRESSURE LINES. PROCEED WITH CARE.

ONLY USE EQUIPMENT WITH THE CORRECT PRESSURE RATING.

BEFORE APPLYING PRESSURE, EXAMINE ALL FITTINGS AND EQUIPMENT FOR DAMAGE.

REPLACE ALL DAMAGED FITTINGS AND EQUIPMENT. DO NOT USE ANY DAMAGED FITTINGS AND EQUIPMENT.

DO NOT EXCEED THE MAXIMUM WORKING PRESSURE OF THE INSTRUMENT.

THIS EQUIPMENT IS NOT RATED FOR OXYGEN USE.
THE GROUND LEAD OF THE INSTRUMENT MUST BE CONNECTED TO THE AC SUPPLY PROTECTIVE SAFETY GROUND.
ISOLATE THE POWER SUPPLY BEFORE MAKING ANY ELECTRICAL CONNECTIONS TO THE REAR PANEL.

1 Description

1.1 Introduction

The PACE Pressure Indicator measures both pneumatic and hydraulic pressures and displays, on a colour touch-screen, the measured pressure and instrument status. The touch-screen enables selections and settings in measuring modes. The instrument can be operated remotely through communication interfaces.

Figure 1-1 PACE1000 General view

The rear of the instrument houses all the electrical and pressure input connections. The electrical connections provide a power supply, serial and parallel communication interfaces, pressure ports and option ports.

The instrument can be used as follows:

- Free-standing instrument positioned on a horizontal surface.
- Rack-mounted in a standard 19 inch rack using the rack-mount option kit.
- Panel mount using the panel-mount option kit.
Options available for the PACE1000 refer to the data sheet.

Information and notes on applications (Ref: Reference and Specification, Section 6) or www.gemeasurement.com
2 Installation

2.1 Packaging

Check the contents of the PACE1000 packaging with the list that follows:

**Packaging List - PACE1000**

i) PACE1000 Pressure Indicator.
ii) Adaptor, power supply (GE part number 191-370).
iii) User guide and safety instructions, and CD containing the full documentation suite.
iv) Calibration certificate.

2.2 Packaging for Storage or Transportation

To store or return the instrument for calibration/repair do the procedures that follow:

1. Pack the instrument (Ref: Reference and Specification, Section 6.13).
2. Return the instrument for calibration/repair complete the return goods procedure (Ref: Reference and Specification, Section 6.12).

2.3 Preparation for Use

The instrument can be used as a:

- Free-standing instrument positioned on a horizontal surface.
- Panel-mounted using the panel-mount option kit (Ref: Section 2.5).
- Rack-mounted in a standard 19 inch rack using the rack-mount option kit (Ref: Section 2.5).

For free-standing instruments, the feet on the front of the base can be used elevate the instrument to a better viewing angle.

*Note: Allow a free flow of air around the instrument, especially at high ambient temperatures.*
2 Installation

2.4 Connecting the Instrument

WARNING

TURN OFF THE SOURCE PRESSURE(S) AND CAREFULLY VENT THE PRESSURE LINES BEFORE DISCONNECTING OR CONNECTING THE PRESSURE LINES. PROCEED WITH CARE.

ONLY USE EQUIPMENT WITH THE CORRECT PRESSURE RATING.

BEFORE APPLYING PRESSURE, EXAMINE ALL FITTINGS AND EQUIPMENT FOR DAMAGE. REPLACE ALL DAMAGED FITTINGS AND EQUIPMENT. DO NOT USE ANY DAMAGED FITTINGS AND EQUIPMENT.

DO NOT EXCEED THE MAXIMUM WORKING PRESSURE OF THE INSTRUMENT.

THIS EQUIPMENT IS NOT RATED FOR OXYGEN USE.

Pneumatic Pressure (Figure 2-1)

1. Refer to the Data sheet for the correct pressure mediums to be used.
2. Connect the Unit Under Test (UUT) to the required connection port.

Note: For instruments with NPT connections, use applicable bonded sealing as shown in figure below.

Figure 2-1, Sealing Pneumatic Connections
Pneumatic connections

**WARNING**

PARALLEL THREADS MUST BE USED. FEMALE THREAD TYPE IS PARALLEL THREAD TO ISO228/1 (DIN ISO228/1, JIS B0202) G1/8.

TAPERED THREADS NOT ALLOWED.

---

**Connection**

<table>
<thead>
<tr>
<th>Input</th>
<th>ISO228/1 G 1/8 parallel threads (DIN ISO228/1, JIS B0202)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reference</td>
<td>ISO228/1 G 1/8 parallel threads (DIN ISO228/1, JIS B0202)</td>
</tr>
</tbody>
</table>

For examples of adaptors (Ref: page 2 - 4).

**Input Pressure (Figure 2)**

1. Make sure the user systems can be isolated and vented.
2. Connect the Unit Under Test (UUT) to the output connection port.

**Note:** For instruments with NPT connections, use applicable bonded sealing as shown in figure below.
2 Installation

The instrument connects to the Unit Under Test.

Input Pressure and Equipment
The pressure should not exceed 1.25 x full-scale or MWP stated on the rear panel of the instrument.

To protect the instrument from over-pressure a suitable protection device (such as a relief valve or bursting disc) must be fitted to prevent over pressurization.

Pneumatic Connection

WARNING
PRESSURE RANGES > 210 BAR (3000 PSI) ARE ONLY RATED FOR HYDRAULIC USE.

CAUTIONS
Do not exceed the maximum pressures stated in the appropriate Component Manual for the unit under test.

Reduce pressure at a controlled rate when venting to atmosphere.
Carefully de-pressurize all pipes to atmospheric pressure before disconnecting and connecting to the unit under test.

Connections
1. Switch off the power supply before connecting or disconnecting the instrument.
2. Use the appropriate sealing method for all pressure connections.

Note: For instruments with NPT connections, use applicable bonded sealing as shown in figure below.
Method of connection

ISO 228 G1/8

bonded seal

Recommended method

ISO 228 G1/8

bonded seal

Alternative method below 100 bar

Adaptors

Refer to the data sheet for the range of adaptors.
Hydraulic Pressure

WARNINGS

HYDRAULIC LIQUID IS DANGEROUS. OBSERVE RELEVANT HEALTH AND SAFETY PRECAUTIONS. USE APPROPRIATE PROTECTIVE BARRIERS AND EYE PROTECTION.

BEFORE APPLYING PRESSURE, EXAMINE ALL FITTINGS AND EQUIPMENT FOR DAMAGE AND ENSURE THAT ALL EQUIPMENT IS TO THE CORRECT PRESSURE RATING.

DO NOT EXCEED THE MAXIMUM WORKING PRESSURE OF THE INSTRUMENT.

PURGE ALL AIR FROM THE HYDRAULIC LIQUID.

PRESSURE RANGES > 210 BAR (3000 PSI) ARE ONLY RATED FOR HYDRAULIC USE.

DO NOT USE A SENSOR FOR GAS THAT HAS BEEN USED WITH HYDRAULIC LIQUID.

CAUTIONS

Do not exceed the maximum pressures stated in the appropriate component manual for the unit under test.

Reduce pressure at a controlled rate when venting to atmosphere.

Carefully de-pressurize all pipes to atmospheric pressure before disconnecting and connecting to the unit under test.

Observe absolute cleanliness when using the instrument.

Severe damage can be caused if equipment connected to this instrument is contaminated.

Connect only clean equipment to the instrument.

To avoid any contamination, an external filter is recommended.
PACE Pressure Indicators User Manual

Installation
The instrument connects to the Unit Under Test.

Input Pressure and Equipment

1. The pressure should not exceed 1.25 x full-scale or MWP stated on the rear panel of the instrument.
2. To protect the instrument from over-pressure a suitable protection device (such as a relief valve or bursting disc) must be fitted to limit the pressure to below the MWP.

Note: For instruments with NPT connections, use applicable bonded sealing as shown in figure below.

![Figure 2-3, Sealing Hydraulic Connections](image)

Hydraulic connections

<table>
<thead>
<tr>
<th>Connection</th>
<th>Input</th>
<th>Reference</th>

</thead>
<tbody>
<tr>
<td></td>
<td>ISO 228/1 G 1/8 parallel threads (DIN ISO 228/1, JIS B0202)</td>
<td>ISO 228/1 G 1/8 parallel threads (DIN ISO 228/1, JIS B0202)</td>
</tr>
</tbody>
</table>

Note: Pressure connections greater than 210 bar are 9/16” 18UNF Male Autoclave.

1. Switch off the power supply before connecting or disconnecting the instrument.
2. Use the applicable sealing method for all pressure connections.
3. Isolate the hydraulic pressures and de-pressurise the pipes before connecting or disconnecting the instrument.

Pressure input (Figure 2)

1. Make sure the user systems can be isolated and vented.
2. Use the applicable sealing method for all pressure connections.
3. The hydraulic liquid must be clean, refer to specification given in the Data sheet.
4. Connect the Unit Under Test (UUT) to the appropriate connection port.
5. Fill and bleed the UUT and connecting pipes.
2 Installation

2.5 Mounting kits

Rack-mount option (Figure 2-5)
There must be enough space at the rear of the instrument for all the cables and pipes. The length of the cables and pipes must allow for the removal and installation of the instrument. The cooling air of the instrument must not be obstructed. Allow a free flow of air through the equipment rack and around the instrument, especially at high ambient temperatures.

Procedure
1. Locate instrument in rack mount assembly ①.
2. Secure with the four M3 x 6 screws ②, (maximum length M3 x 8).
3. Support the instrument and connect the cables and pipes.
4. Refer to the electrical connections below before fitting the instrument into the equipment rack.
5. Temporarily locate the two spigots* to each side of the equipment rack.
6. Locate and slide the instrument into the rack.
7. Locate the instrument on the spigots*.
8. Secure the instrument in the equipment rack with two of the screws and washers (supplied).
9. Remove the two spigots* and replace with the remaining two screws and washers (supplied).

Panel-mount option (Figure 2-6)
There must be enough space at the rear of the instrument for all the cables and pipes. The length of the cables and pipes must allow for the removal and fitment of the instrument. The cooling air of the instrument must not be obstructed. Allow a free flow of air through the equipment rack and around the instrument, especially at high ambient temperatures.

Procedure
1. Remove the four screws ① from the instrument.
2. Locate the instrument in panel mount assembly.
3. Secure with the four screws ①.
4. Support the instrument and connect the cables and pipes.
5. Refer to the electrical connections below before fitting the instrument into the panel.
6. Secure the instrument in the panel with four screws and washers ②.
2 Installation

2.6 Electrical connections

WARNINGS

THE GROUND LEAD OF THE INSTRUMENT MUST BE CONNECTED TO THE AC SUPPLY PROTECTIVE SAFETY GROUND.

ISOLATE THE POWER SUPPLY BEFORE MAKING ANY ELECTRICAL CONNECTIONS TO THE REAR PANEL.

CAUTIONS

Use the power adaptor supplied with the instrument (GE part no. 191-370). Using other power adaptors may cause over-heating, this can result in a fire.

Do not let the power adaptor come into contact with any moisture or liquids.

Connecting (Figure 2-7)

1. Before use, make sure the SELV power adaptor supplied with the instrument is used (GE part number 191-370).
2. Install an accessible power isolator to use as the disconnecting device in the power adaptor supply circuit.
3. The power adaptor input power supply range: 100 - 240VAC, 50 to 60Hz 660mA, Installation Category II.

Note: The power adaptor must be supplied by a fused or overload-protected power supply.

4. Connect the power adaptor to the instrument.
5. Switch the power supply on.
6. Check that the front panel display shows the power-up sequence (Ref: section 3.2).

Note: After the power-up sequence, the instrument shows the default display on the touch screen. The touch screen divides into a number of mimic keys.

Requirements for rack-mounted and panel-mounted instruments

1. Install an accessible power isolator to use as the disconnecting device in the power adaptor supply circuit.
2. Set the power supply isolator to OFF.
3. Connect the power adaptor before sliding the instrument into the rack.
4. Set the power supply isolator to ON.
5. Check that the front panel display shows the power-up sequence (Ref: section 3.2).
Communication Connections

Connect the applicable connectors into the rear panel communications ports and, if appropriate, secure with the captive screws.

Note: The RS232 and IEEE 488 interfaces are both enabled at power-up. Set the required parameters in Supervisor Setup/communications menu, see Section 3.6.

**RS232 Interface**

When using the RS232 interface, a cable must be connected directly from the instrument to a suitable port on the computer in a ‘point to point’ link.

The pin connections for the 9-pin D-type, RS232 connector and the relationship between the instrument and the RS232 control signals, together with device interconnection interface is shown in Table 2-1. The instrument is configured as Data Circuit Terminating Equipment (DCE).

### Handshaking connections

Software handshaking use: TxD, RXD and GND.
Hardware handshaking use: TxD, RXD, GND, CTS, RTS and DTR.
IEEE 488 Interface
The interface complies with IEEE 488 standard.
The IEEE 488 parallel interface connects a computer/controller to one or more PACE1000 instruments and other instruments.
Up to 30 instruments can be connected through a high-speed data bus to the computer/controller.

Note: The length of each IEEE 488 cable must be less than 3 metres to comply with the EMC requirements (Ref: Data sheet).

Single Unit Installation (Figure 2-8)
1. Connect an IEEE 488 connector/cable assembly to the rear panel of the instrument.
2. Connect the other end of the connector/cable assembly to the IEEE 488 connector on the controller/computer.
3. Change the IEEE 488 communication parameters (Ref: Supervisor set-up, Section 6.7).

Multiple Unit Installation (Figure 2-8)
To install multiple units use stacking plugs to link the first instrument and second instrument as follows:
1. Connector to rear panel of first instrument (Ref Illustration).
2. Connector from controller/computer (Ref Illustration).
3. Connector to rear panel of second instrument (Ref Illustration).
4. Connect the IEEE 488 connector on the controller/computer and the other connector into the next instrument.
5. Repeat this procedure for all the instruments in the system.
6. Use the Supervisor set-up (communications) menu on each instrument to set-up the required communication parameters (Ref: Section 3.8).
Figure 2-8 - IEEE 488 Connection
3 Operation

This section contains quick reference charts detailing all the available functions and the set-up menu.

3.1 Preparation

Make sure the electrical cables and pneumatic pipes comply with the installation requirements (Ref: Section 2).

Before use do the following:

1. If necessary, do the maintenance task (Ref: Section 4).
2. For bench-top, single instrument operation do the following:
   a. Connect the instrument to the electrical supply.
   b. Inspect the pneumatic hoses for damage, ingress of dirt and moisture.
3. Before use, the instrument should be tested.
4. Review and become familiar with the procedure before starting a process on a component or system.

3.2 Power-up sequence

The following sequences of operation shows the instrument display.

*Note: The following sequence is an example, the values and selections displayed depend on the range(s) and options enabled in the instrument.*

1. Set the power supply to ON.
2. The display shows the power-up sequence.
3. The instrument carries out a self-test.
   a. If the test finds a fault, the display shows an error (Ref: Fault Finding and Testing, Section 5).
4. If the self-test is successful the system enables the touch screen and changes to measure mode.
5. The touch screen shows the measured pressure in the parameters selected in set-up.
6. The instrument is now ready for use.

Do not touch the display screen during power-up.
3 Operation

3.3 Measure mode

Stores settings and exits set-up.
3 Operation

3.4 Operation and Example Procedures

Introduction
Before operation, the instrument must be connected to the correct electrical and pneumatic/hydraulic supplies, (Ref: Installation, Section 2).

When the instrument is switched ON the display shows measured pressure mode and the task set before the power-off.

Measure Mode
The instrument works as a precision pressure indicator and shows the pressure measured at the output port.

Pressing Task enables pre-determined functions:

Task

* Option refer to data sheet

Selecting a task exits the menu and changes the display to the task selected.

The display shows the task screen (Ref: Illustration above).

When selected, e.g. Basic, the screen changes to show the selected task.

To measure pressure in the task proceed as follows:

1. Select the required units of pressure measurement from the measure set-up menu.
**Note:** In the Airfield Task Q codes can be used. These units are standardised three letter codes and are available in aeronautical units (feet and metres). The codes used are:

- **QFE** - Atmospheric pressure at sea level, corrected for temperature and adjusted to airfield elevation. When set on the altimeter it reads height.
- **QNE** - Atmospheric pressure at Sea level in International Standard Atmosphere (ISA) 1013.25 mbar.
- **QFF** - Barometric pressure at a place, reduced to Mean Sea Level (MSL) using the actual temperature at time of observation as mean temperature.
- **QNH** - Atmospheric pressure at Mean Sea Level (MSL) (may be local, measured pressure or a Regional Forecast Pressure (RFP). When set on altimeter it reads altitude.
3 Operation

Leak testing option
This task, measures the leak rate over the measure dwell time.
At the start of the test, the instrument measures the test pressure of the user system. The instrument then records the pressure change during measure dwell time.
On completion, the display shows the leak rate results with leak rate per second or per minute in the current pressure units selected in measure set-up.
3.5 Global Set-up Selections

Global set-up selections provide access to the instrument’s settings for both measure and control modes. This set-up menu provides PIN-protected access to the supervisor set-up and calibration. Pressing Global Set-up changes the touch-screen display to show available selections.

**Supervisor Set-up, Calibration, Save/Recall User Set-up and Display.**

1 Selections  2 Escape Key

**Global set-up**

- **Supervisor set-up**

</tr>
<tr>
<td>Calibration</td>
<td>12 months †</td>
</tr>
</tbody>
</table>

* may change depends on usage (e.g., rack mounted, bench top) and environment (e.g., humidity, dust).
† may change depends on the required accuracy.

4.2 Visual Inspection

Inspect for obvious signs of damage and dirt on the following:

a. External of the instrument.
b. Power supply adaptor
c. Associated equipment.

Damaged parts must be replaced contact GE Service.

For cleaning (Ref: Cleaning Section 4.3).

4.3 Cleaning

CAUTION
Do not use solvents for cleaning.

Clean the front panel with a damp lint-free cloth and mild detergent.

4.4 Test

Do a standard serviceability test (Ref: Standard Serviceability Test, Section 5.2).

4.5 Calibration

The instrument should be returned to the manufacturer or calibration facility, (Ref: Section 6.14).

To find the date of the last calibration, press Measure set-up/Status/Calibration history.
4 Maintenance

Intentionally blank
5 Testing and Fault Finding

5.1 Introduction

This section details the standard serviceability test. Table 5.1 lists possible faults, and the response.

The PACE1000 contains a self-test and diagnosis system that continuously monitors the performance of the unit. At power-up, the system performs a self-test.

5.2 Standard Serviceability Test

The following procedure shows if the unit is serviceable and checks functions and facilities of the PACE1000.

Procedure

CAUTION
Always release pressure before disconnecting pressure equipment from the outlet port.

1. Connect the instrument (Ref: Installation, Section 2) Connect a UUT.
2. After power-up, select measure set-up.
   a. Select the required units of pressure measurement from the measure set-up menu.
   b. Apply a known pressure to one of the sensors. Make sure the instrument pressure reading is within tolerance, stated in the specification (Ref: SDS).
   c. Carefully release the applied pressure to atmospheric pressure.
   d. Make sure the instrument pressure reading shows atmospheric or ambient pressure.
   e. Test complete.

After a successful serviceability test the instrument is ready for use.

5.3 Ethernet Testing

1. Connect PACE Ethernet port to a PC.
2. Check the PACE Ethernet LAN indication turns green after a few seconds.
3. Set the PACE Ethernet address to Auto IP.
4. Record the PACE auto IP address (The test screen below has auto IP address 3.115.21.237)
5. Open the PC command prompt screen.
6. Using the “ping” command, ping the PACE IP address (see screen capture below). The PACE will reply if operating correctly.

6 Reference and Specification

6.1 Installation notes

The PACE1000 pressure indicator requires a set of connections with the exception of the reference connection, this provides a reference to atmosphere for gauge sensors and barometric sensors.

The gas density and type does not affect the accuracy of pressure measurement, assuming that the UUT is at the same level (height) as the indicator or gas head correction is accurately set.

Values of air density (kg m\(^{-3}\)) for air of relative humidity 50% and containing 0.04% carbon dioxide by volume.

6 Reference and Specification

6.2 Reference Port

The reference port provides the negative pressure to the gauge sensor and to the barometric reference (option). Gauge sensors use this port identified as “REF”. For gauge sensors (without a barometric reference) small pressures can be applied (Ref: Specification, Section 6-7). All other pressure measurement requires the port to be opened to atmosphere. When in gauge mode, the instrument shows and controls the pressure difference between the reference port and the output port.

Note: This is not a true differential operation as there is no true differential calibration of the sensor.

The transducer of the barometric reference option senses atmospheric pressure via the reference port, when enabled the port MUST be open to atmosphere. The reference connection should be actively used (differential connection option) for precision low pressure measurement. The instrument measures pressure relative to the pressure at the reference port.

An atmospheric pressure change causes the indicator to adjust the pressure and appears at the pressure output as apparent instability. To keep a stable controlled pressure, the reference port should be restricted. Using a reference port restrictor (snubber), short term ambient pressure variations can be prevented from affecting indicator performance. The indicator and UUT references should be connected together (using the optional differential connection kit) to provide a common reference to atmosphere.

6.4 Measure Set-up

**Pressure zero**

During use, the instrument pressure sensor can show small zero shifts caused by time and temperature changes. Regular “zeroing” increases measuring precision.

**Process**

Selects display processing features that change the reading, as follows:

- **%:** Pressure can be displayed reading as a percentage of full-scale or as a percentage of a specified span.

- **Filter:** The displayed reading can be filtered by a custom low pass filter or the filter can be disabled (default disabled). The indicator works at a speed independent of the filter time constant.

- **Tare:** A specific tare value can be selected or the current displayed pressure reading can be “captured” as the tare value. The display shows the selected tare value in the pressure window.

- **Peak:** Maximum, minimum and average display of pressure readings.

**Task**

Selecting Task enables a set of pre-determined functions and software enabled optional functions.
Units
Select the new units from the list of pressure measurement units. Special units can also be defined (Ref: Global set-up, Section 6.6, supervisor set-up).

Global set-up
Ref: Global set-up, Section 6.6.

Set-up zero
Zero from top level screen (main range only).
If other ranges are fitted these can be zeroed by selecting the displayed reading.

Barometric Reference Option
The barometric reference option measures the barometric pressure at the reference port.
Depending on the sensors fitted, it also permits the indicator to operate in either pseudo-gauge or pseudo-absolute mode by the addition of barometric pressure.

6.5 Status
The display shows the following:
a. Instrument status
   - Model
   - Serial number
   - MAC address sensor(s)
   - Range
   - Last calibration date*
b. Software build - read only data.
c. Hardware build - read only data.
d. History - read only data
   - Calibration
   - Zero
   - Software
   - Hardware
   - Message
   - Ethernet connection
e. Communications, IEEE 488 and RS232 are fitted as standard. Additional communication types are options - USB and Ethernet.
f. Current set-up - read only data.
g. Support
   - List contact information for support and advice.
6 Reference and Specification

6.6 Global set-up

Supervisor set-up
PIN protected menu (Ref: Supervisor set-up, Section 6.7).

Calibration
PIN protected menu (Ref: Calibration set-up, Section 6.8).

Save/recall user set-up
Save user set-up.
Recall user set-up.

Display
a. Resolution
b. Backlight
c. Audio volume
d. Status area
e. Display Mode
   • Reading (default)
   • Graph

* The instrument date and time must have been set correctly.
6.7 Supervisor Set-up

The Supervisor menu provides facilities for programming settings. These are usually made during installation as follows:

**Important Note:** A PIN protects the Supervisor menu against unauthorised use. Each instrument on delivery contains the factory set PIN (0268). To continue protecting the supervisor set-up menu the PIN should be changed as soon as possible.

**Alarms**

An alarm can be set to trigger when the pressure exceeds the high alarm or falls below the low alarm. A buzzer sounds when the alarm triggers and the alarm symbol (bell) appears on the display.

**Comms**

Selects the communication port parameters and simultaneous operation of the RS232, IEEE 488 interface and Ethernet.

*Note: PACE1000 Lab view drivers are available for download from:*

The user can select appropriate settings for communicating with the control computer (PC) and the required command protocol.

Referring to the PACE SCPI communications user manual there are three commands that can be used to retrieve pressure readings from the PACE100X:

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>:INST:SENS[x]:READ?</td>
<td>Where x = 1 to 8 set in the comms range menu</td>
</tr>
<tr>
<td>:SENS:PRES?</td>
<td>Returns the reading top main display window with display filtering (2Hz update rate) applied</td>
</tr>
<tr>
<td>:DISP[x]:WIND?</td>
<td>Where [x] = display (1=top main, 2=middle status area &amp; 3= bottom function area) window</td>
</tr>
</tbody>
</table>

To obtain fastest readings you must use the following SCPI command: :INST:SENS[x]:Read?

This command returns two readings, a filtered reading and a raw reading (unfiltered reading) from internal sensors, thus giving the user a choice of which reading to use which is most suitable for their application.

*Note: Raw reading returned from IDOS sensors is "0" as a raw readings cannot be obtained from IDOS sensors.*

Data throughput. Baud rates slower than 115k2 baud will slow the new data update rate pro-rata. Even at a 115k2 baud rate the readings are slower than using IEEE. IDOS is a slower sensor than internal sensors.
RS232
Located on the rear panel an external RS232 connection requires the following:

Connector 9-way ‘D’ female wired as per Table 2-1
Communications RS232 point-to-point only (daisy chain is not supported)
Baud Rate power-up default 9600, no parity & handshake = xon/xoff
Baud rates selectable ** 2400, 4800, 9600, 19k2, 38k4, 57k6 & 115k2
Parity None, Odd & Even
Flow control None, Hardware & xon/xoff
Protocols PACE SCPI
Heritage emulation DPI 142/150, DPI 141
Terminator CR or LF or CR/LF

** Selectable through the user interface.

RS232 Comms Range Setup

Note: The RS232 Comms Range values are set up by the user because of the hardware the user desires to operate with the PACE 1000 equipment. This procedure only allows supervisor to select these user pre-installed values. To initially define / change or delete the RS232 Comms Range values, refer to (Ref: K0472 PACE SCPI Remote Communications Manual).
1. On the main screen, touch any of the three horizontal touch areas on the screen.

2. On the MEASURE SETUP screen, select GLOBAL SETUP.
3. Select SUPERVISOR SETUP.

4. Enter the Supervisor PIN and press the top touch area. Use the back arrow in the top right corner of the screen to delete any incorrect data entries.
5. On the SUPERVISOR screen, select COMMS.

6. On the COMMUNICATIONS screen, select COMMS RANGE SETUP.

7. On the COMMS RANGE SETUP, Use the Up and Down arrows to highlight the desired Range (Ranges 1 to 10).
6 Reference and Specification

Comms range setup is used to re-align the SCPI index \(x\) to the correct pressure range. Where Range is index \(1\).....etc.

8. Press the top touch area on the screen to change the range value.
9. Use the Up and down arrow to highlight the new Range value.
10. Press the top Measure on the screen to change the range value. The new range value is set and the screen returns to the COMMS RANGE SETUP screen.
11. If necessary, repeat Steps 7 to 10 to set up other range values.
12. Press the Escape icon to go back to the COMMS RANGE SET UP screen.
13. When complete, press the Escape icon as necessary to return to the Measure screen.

IEEE
Located on the rear panel an external IEEE 488 connection requires:

<table>
<thead>
<tr>
<th>Connector</th>
<th>24-way ‘D’ female wired as IEEE 488 standard</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communications</td>
<td>IEEE488 GPIB</td>
</tr>
<tr>
<td>Default Address</td>
<td>16</td>
</tr>
<tr>
<td>Protocols</td>
<td>PACE SCPI</td>
</tr>
<tr>
<td>Heritage emulation</td>
<td>DPI 142/150, DPI 141</td>
</tr>
</tbody>
</table>

Ethernet
Located on the rear panel an external Ethernet connection requires the following:

<table>
<thead>
<tr>
<th>Connector</th>
<th>Ethernet RJ45</th>
</tr>
</thead>
<tbody>
<tr>
<td>Protocol</td>
<td>SCPI</td>
</tr>
<tr>
<td>Terminator</td>
<td>CR/LF</td>
</tr>
<tr>
<td>Default Address</td>
<td>Auto IP (0.0.0.0)</td>
</tr>
<tr>
<td>Host name</td>
<td>PACExxxxxxx (where xxxxxx = serial number)</td>
</tr>
<tr>
<td>Web Password</td>
<td>0268</td>
</tr>
<tr>
<td>Access control</td>
<td>Open</td>
</tr>
<tr>
<td>Reset LAN Settings</td>
<td>Selected in Supervisor set-up menu</td>
</tr>
</tbody>
</table>

Ethernet Firewall
A firewall protects the Ethernet connection. The firewall is always turned on. The following ports are unfiltered to allow remote communication and control.

<table>
<thead>
<tr>
<th>Port</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>80/tcp</td>
<td>http (Web server)</td>
</tr>
<tr>
<td>111/tcp</td>
<td>rpcbind (RPC for VXI)</td>
</tr>
<tr>
<td>111/udp</td>
<td>rpcbind (RPC for VXI)</td>
</tr>
<tr>
<td>443/tcp</td>
<td>https (Web server)</td>
</tr>
</tbody>
</table>
Ethernet Functionality
- PACE Ethernet supports both VXI-II and Sockets automatically.
- Socket port address 5025.
- Internet protocol IP4.

Ethernet Parameters Range Setup
1. Touch any of the three horizontal Measure touch pads on the home screen to open the CONTROL SET UP screen.
2. On the MEASURE SETUP screen, select GLOBAL SETUP.
3. Select SUPERVISOR SET UP.
4. Enter the Supervisor PIN and press ENTER SUPERVISOR PIN. Use the back arrow in the top right corner of the screen to delete any incorrect data entries.

Note: The factory set Supervisor PIN is 0268. If the Supervisor PIN has been locally changed, make sure that the new PIN is kept in a safe place. If the new PIN is lost, it can only be reset at a GE Service Centre.

5. Press COMMUNICATIONS STATUS to open the COMMUNICATIONS STATUS screen.

6. Select ETHERNET to open the ETHERNET PARAMETER screen.
7. To change the ADDRESS parameter, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows to highlight the ADDRESS field.
   b. Press the top touch pad on the screen to enter the ADDRESS TYPE screen.
   c. Use the UP and Down arrows to highlight the desired address type (either AUTO IP or STATIC).
d. Press the top touch pad on the screen to set the new address type. The screen automatically returns to the ETHERNET PARAMETERS screen.

8. To change the host name, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the HOST NAME field.

   b. Press the top touch pad on the screen to enter the HOST NAME screen.
   c. Use the keyboard to input the new host name and then press the top button on the screen to set the host name. The screen automatically returns to the ETHERNET PARAMETERS screen.
9. To change the web password, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the WEB PASSWORD field.
   b. Press the top touch pad on the screen to enter the WEB PASSWORD screen. The keyboard screen opens.
c. Use the keyboard to input the new web password and then press the top touch area on the screen to set the new password. The screen automatically returns to the ETHERNET PARAMETERS screen.

10. To reset the LAN settings, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the RESET LAN SETTINGS field.
   b. Press the RESET THE LAN SETTINGS touch pad on the top touch pad of the screen.
   c. The RESET LAN SETTINGS sub-screen asking for confirmation of the reset. Press YES to confirm reset of the LAN settings.

11. To turn the LAN status indicator on or off, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the SHOW LAN STATUS field.
b. Use the UP and DOWN arrows to highlight the desired setting. The setting is either ON or OFF.

c. Press the top touch pad on the screen to set the new setting.

12. To change ACCESS MODE, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the ACCESS CONTROL field.
b. Press the ACCESS CONTROL OPEN touch pad on the top of the screen to open the ACCESS MODE screen.

c. Use the UP and DOWN arrows to highlight the required parameter. The choices are OPEN or RESTRICTED.
d. Press the ACESS MODE OPEN or ACESS MODE RESTRICTED touch pad at the top of the screen to set the required access mode.

13. To change CONTROLLER IP ADDRESS complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the ACCESS CONTROL field.
   b. Press the ACCESS CONTROL touch pad on the top of the screen.
   c. Use the UP and DOWN arrows to highlight the CONTROLLER IP ADDRESS field.
6. Reference and Specification

d. Use the number touch pad at the bottom of the screen to input the new IP address and press the CONTROLLER IP ADDRESS touch pad at the top of the screen to set the new IP address.

14. To view the recent IP addresses, complete the following:
   a. On the ETHERNET PARAMETER screen, use the UP and DOWN arrows on the right of the screen to highlight the ACCESS CONTROL field.
   b. Press the ACCESS CONTROL button on the top of the screen.
   c. Use the UP and DOWN arrows to highlight the SELECT FROM RECENT field.
d. Press the SELECT FROM RECENT button at the top of the screen to view the IP address history.

**Head Correction**

Corrects pressure reading for the height difference between instrument reference level and UUT. For accuracy, head correction must be enabled and the parameters set for each sensor:

- for UUT positioned higher than the reference level of the PACE1000 enter a positive height correction.
- for UUT positioned lower than the reference level of the PACE1000 enter a negative height correction.
6 Reference and Specification

**Lock Tasks**

**Individual tasks:**
Allows any combination of individual tasks to be disabled.

**Note:** Restricts operation of the instrument to specific tasks or functions, recommended for production procedures.

**All:**
Disables all tasks.

**Change PIN**
Changes the Supervisor PIN: enter the existing PIN, then the new PIN and confirmation of the new PIN.

**Note:** Confirmation of the new PIN permanently replaces the old PIN. Record this new PIN and keep in a safe place. If new PIN is lost it can only be reset by returning the instrument to a GE service centre.

**User defined units**
Permits the user to define a set of units. Following the on-screen prompts special units may be set by selecting a Pascal multiplier and assigning a five character name.

**Instrument alias name**
Permits the user to define a 20 character alias name for the instrument. The instrument returns this name through the communications interfaces.

**Language**
Operation in any of the languages refer to the SDS. *Further languages can be up-loaded.*

**Restore as shipped settings**
Restores instrument settings to factory default.

**Note:** Does not affect PIN settings.
6.8 Calibration

The calibration menu provides facilities for programming settings for maintenance as follows:

**Note:** A PIN protects the Calibration menu against unauthorised use. Each instrument, on delivery, contains the factory set PIN (4321). To continue protecting the supervisor set-up menu, the PIN should be changed as soon as possible.

**sensor correction**
- Selects the range for a three-point calibration routine.

**screen calibration**
- Selects touch screen calibration routine.

**Time & Date**
- Sets instrument clock and date.

**Change PIN**
- Changes the Calibration PIN.
  a. Enter the existing PIN
  b. Enter the new PIN
  c. Confirm the new PIN

**Note:** Confirmation of the new PIN permanently replaces the old PIN. Record this new PIN and keep in a safe place. If new PIN is lost it can only be reset by returning the instrument to a GE service centre. For more information regarding calibration, refer to PACE Calibration Manual K0450.

6.9 Specification

Refer to the PACE1000 data sheet for details.

**Note:** The data sheet is contained in the CD shipped with the product.
6 Reference and Specification

6.10 Options

Option enable process

To enable soft options on a PACE instrument, use the following:

1. Touch the top Measure area of the screen.
2. Select Global Setup.
3. Select Calibration.
4. Enter a Calibration PIN 1234.
5. Enter new option key xxxxxxxxxx (10 digits).
6. After entry of this key PACE confirms the options have been enabled.

Note: Hardware options automatically enable post installation

Selects Analogue Output Range

On/Off

Update rate of Analogue Output option from the control module.

15-way female D connector

Analogue Output Bandwidth = 0.5 x Update Rate [Hz]

To maintain PACE product safety, external circuits connected to the instrument must meet Safety Extra-Low Voltage (SELV) requirements.

6.11 Installation and Ancillary Equipment Kit
Refer to the PACE1000 data sheet for details.

6.12 Return Goods/Material Procedure
If the unit requires calibration or is unserviceable return it to the nearest GE Service Centre listed at www.gemeasurement.com

Contact the Service Department to obtain a Return Authorisation (Worldwide excluding USA).
In the USA obtain a Return Material Authorization [RMA].

Providing the following information on either a RGA or RMA:
- Product (i.e. PACE1000)
- Serial number
- Details of defect/work to be undertaken
- Calibration traceability requirements
- Operating conditions

Safety Precautions
You must inform GE if the product has been in contact with any hazardous or toxic substance.
The relevant COSHH or in the USA, MSDS, references and precautions to be taken when handling.

Important notice
Service or calibration by unauthorized sources will affect the warranty and may not guarantee further performance.

6.13 Packaging Procedure
1. The instrument should be at zero/ambient pressure.
2. Switch off and isolate the electrical power supply to the instrument.
3. Shut off the pneumatic pressure and vacuum supplies to the instrument.
4. Remove the instrument from the equipment rack to access the rear panel.
5. Disconnect the power supply cable and the pneumatic supply hose assemblies.
6. Stow the power supply cable in the packaging below.
7. Remove any pressure adaptors, diffusers and restrictors.

If available, use the original packing material. When using packing materials other than the original, do the following:
8. Fit protection to all the ports to prevent ingress of moisture and dirt.
   Note: Use the original red plastic plugs or low tack masking tape.
9. Wrap unit in polyethylene sheeting.
6 Reference and Specification

10. Select a double-wall cardboard container.
   • Inside dimensions must be at least 15 cm (6") greater than the equipment
   • The carton must meet test strength requirements of ≥125 kg (275 lbs).
11. Protect all sides with shock-absorbing material to prevent equipment movement within the container.
12. Seal carton with approved sealing tape.
13. Mark carton “FRAGILE” on all sides, top, and bottom of shipping container.

Environment

The following conditions apply for both shipping and storage:
   • Temperature range-20° to +70°C (-4° to +158°F)
