

# Rhythm<sup>®</sup> Image Stitching Software Solutions

Image Stitching is a plugin to Rhythm Review, providing image stitching capabilities to form one single image from multiple images. Image Stitching provides enhancements in both speed or large asset analysis and increases probability of detection.

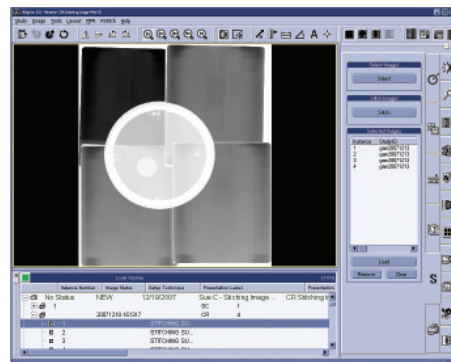

- A single image can be created for a single missile, pipe section, wing section, painting, etc.
- Create meaningful presentations of NDE inspections to non-NDE personnel
- Compare distance measurements of critical areas captured by different imaging plates (i.e. security, pipe bombs)
- DR images captured during automated manipulation sequences can be accurately stitched into a single mosaic. (i.e. large turbine blade which cannot be covered by a single DR exposure)
- Helpful when printing overlay transparencies (mosaic size only limited by printer)

Move, flip, rotate images to align

Stitch images together in selected order

Stitched image stored within the original study for analysis

\* Rhythm Review (sold separately) required to operate Image Stitching.
