

# Snapshot™ Clipboard Software

## Bently Nevada™ Asset Condition Monitoring

---

### Description

Snapshot Clipboard is a software application, which allows you to log meter and gauge readings, make observations, select note codes and make free hand notes, which would normally be written down on a log sheet. The software runs on off the shelf low cost pocket PC devices, which use the Microsoft Windows® (CE or Mobile) for Pocket PC operating system.

### Main features

- A tool for plant operations personnel and maintenance engineers.
- Removes the need for pen and paper data logging.
- Operates on "off the shelf" pocket PC devices.
- Logged data can be uploaded and stored in database formats.
- Manually entered process data can be correlated with other condition monitoring data to give the complete picture.
- In field alarm notification. Snapshot Clipboard indicates if the current data entered has exceeded a pre-determined set point. Alarms can be set for level, in band and out of band.
- Easy to navigate route hierarchy.
- Make observations and notes either by selecting from a predetermined list or typing a note on the touch screen display.
- Inspection points.
- Can be configured for the following process parameters.
  - Current
  - Mass
  - Temperature
  - Flow
  - MegaVAR
  - Torque
  - Force
  - Power
  - Valve position
  - Frequency
  - Power factor
  - Voltage
  - Inspection
  - Pressure
  - Weight
  - Load
  - Process speed
  - Custom

Snapshot Clipboard software interfaces directly with System 1™ host software for permanent storage of all collected data and for system configuration functions (refer to System 1 Specifications and Ordering Information data sheet, p/n 145146-01).
